Title: Changes of Macular Sensitivity and Morphology After Pars Plana Vitrectomy For Macular Edema With Central Retinal Vein Occlusion: a case series

Version: 1 Date: 5 October 2012

Reviewer: Kiyoshi Suzuma

Reviewer's report:

This manuscript describes effects of PPV on CRVO. The authors claim that PPV is more effective in ischemic CRVO than non-ischemic CRVO. Their findings may be interesting and important. I have following comments:

1) I could not find table 1. Are there differences in term from onset between ischemic and non-ischemic? Term from onset is a very important factor to evaluate effects of treatments for RVO.

2) Sample size is too small to show any significant differences. Patients with retreatments during 6 month follow up period should not be excluded since this exclusion can make significant bias.

3) Why authors did not ILM peeling?

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
