Reviewer's report

Title: Peripapillary choroidal thickness in healthy Chinese subjects

Version: 2 Date: 1 May 2013

Reviewer: Luca M Rossetti

Reviewer's report:

This is a nice paper about assessment of choroidal thickness in a healthy sample from Chinese population. The study design, conduct and type of analysis are sound. I have no particular comments but the ones that are following:

- Complete reference number 4.
- Methods: patients with mild to moderate cataract could be enrolled in the study. Please state clearly that this did not compromise the quality of the OCT images.
- Methods: did the authors assess the reproducibility of the measurements? If not please mention and discuss.
- Methods: were all the measurements taken by the same evaluator? If not please mention and discuss.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
