Reviewer's report

Title: Purtscher-like Retinopathy Associated with Dermatomyositis

Version: 2 Date: 16 June 2013

Reviewer: Ben Burton

Reviewer's report:

Purtscher-like retinopathy is used in patients with no relation to trauma.
Please rephrase or omit completely.

"Two weeks" is easier to read than "half of one month", please change.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
