Reviewer's report

Title: Bilateral non-arteritic anterior ischaemic optic neuropathy in the setting of FOLFOX chemotherapy

Version: 2 Date: 6 May 2013

Reviewer: Dan Milea

Reviewer's report:

The authors report a case of bilateral non-arteritic anterior ischaemic optic neuropathy in the setting of chemotherapy. The case and its work-up are well described and the literature nicely reviewed.

Major Compulsory Revision: the authors should comment on the main local risk factor for NAION, i.e. disc at risk ratio. Was the patient evaluated for this risk factor at his initial presentation? Would such an anatomical predisposition increase the risk for NAION in this case? How would this apply to their recommendations for evaluating these patients in the future, prior chemotherapy?

There are some minor spelling errors, eg "afferent papillary defect" instead of "pupillary defect".

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
