Reviewer's report

Title: Branch Retinal Artery Occlusion Following Radiation Therapy to the Head and Neck: A Case Report

Version: 1 Date: 16 September 2013

Reviewer: Jun Liu

Reviewer's report:

Major Compulsory Revisions:
1. This work is lack of innovation for the fact that radiation therapy promotes the development of atherosclerosis by damaging the vascular endothelium has been reported previously.
2. Demonstrating that patients receiving irradiation may be at increased risk for developing a BRAO sounds not so significant.

Minor Essential Revisions:
1. As patient’s past medical history was significant for hyperlipidemia, and family history was significant for coronary artery disease (CAD), so it needed to give evidences to rule out these effects.

Discretionary Revisions:
1. Suggest that provide bilateral fundus photo and fluorescein angiogram so that give readers a contrast.
2. Moreover, the figures are beautiful and deserve praise.
3. Part of the grammar can be appropriately modified.

Level of interest: An article of limited interest
