Reviewer's report

Title: Effect of prophylactic 360 degrees laser treatment for prevention of retinal detachment after phacovitrectomy.

Version: 2 Date: 28 October 2013

Reviewer: Annal Meleth

Reviewer's report:

Minor essential revisions:

A number of small grammatical errors remain which should be addressed in the process of editing for publication; primarily preposition usage.

Examples: in the "other complications" subsection of the results:
1. "Proportions of ERM" should be changed to "The proportion of ERM/The prevalence of ERM formation"
2. "Postoperative ERM was developed" should be changed to "Postoperative ERM developed"
3. "Two eyes had the posterior capsular rupture" should be changed to "Two eyes had rupture of the posterior capsule/Two eyes had posterior capsular rupture"

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
