Reviewer's report

Title: Retinal and choroidal thickness measurements using spectral domain optical coherence tomography in anterior and intermediate uveitis

Version: 2
Date: 22 April 2014
Reviewer: Alastair Denniston

Reviewer's report:

Thank you. This is a simple study which builds on previous work identifying retinal thickening in uveitic patients even in the absence of frank macular oedema. Although weakened by its retrospective design, it acknowledges these and the findings are of interest.
