Reviewer's report

Title: Effects of extraocular muscle surgery in children with monocular blindness and bilateral nystagmus

Version: 3 Date: 18 March 2014

Reviewer: Ellen Mitchell

Reviewer's report:

Major revisions:
1. There is no mention if an Institutional Review Board approval was obtained.
2. The data presented (limited by the scope and number of patients) does not allow me to reach the same conclusions as the authors. It is difficult to make a general claim as the author's do that an initial recess resect should be the first approach based on the data presented. Only 5/9 of their patients (slightly more than 50%) underwent this procedure as the first step.

Minor revisions:
1. Spelling and grammatical errors need to be corrected

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
