Title: Funduscopic Results after 4-Year Follow-Up Treatment with Ranibizumab for Age-Related Macular Degeneration in a Region of Spain

Version: 1 Date: 15 July 2014

Reviewer: Alfredo Garcia-Layana

Reviewer's report:

The paper meets requirements and length is also correct. It opens smoothly as the introduction preview the main points of the paper; the thesis of the paper is clear and some innovative. It is also well organized despite the large amount of data provided. Sources are appropriately integrated and cited.

The question posed by the authors is well defined. The methods are appropriate and well described. The data are sound and compare with other studies performed in other countries.

The manuscript adhere to the relevant standards for reporting and data deposition.

The discussion and conclusions are well balanced and adequately supported by the data.

The limitations of the work are stated, but they said that the VA estimates were recorded as Snellen acuity and converted to the ETDRS equivalent, but in the work they talking about logMar not about ETDRS. That must be clarified.

The title convey what has been found, However the number of injections, visits and visual acuity change should be mentioned in the abstract.

The writing is acceptable.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
