Title: Comparison of the Adult Strabismus Quality of Life Questionnaire (AS-20) with the Amblyopia and Strabismus Questionnaire (ASQE) among adults with strabismus who seek medical care in China

Version: 11 Date: 10 September 2014

Reviewer: Jill Carlton

Reviewer's report:

Discretionary Revisions

I feel that the authors have addressed virtually all points. The issue which has not been addressed is that of potential order-effects due to the study team always issuing the same questionnaire first to their study cohort. I appreciate that the team cannot go back and change their approach, but some may argue it should be mentioned in the Discussion as a potential source of bias (co-founding variables).

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
