Reviewer's report

Title: Retinal artery occlusion as the only manifestation of left atrial myxoma: a case report

Version: 2 Date: 10 September 2014

Reviewer: Cheung-Ter Ong

Reviewer's report:

Major Compulsory Revisions
2. In the abstract: "A retinal artery occlusion was found in her right eye". This is different to the case presentation, which is "left retinal artery occlusion".
3. Background, the author must show the importance or the special of report the case, not only it is a rare case.
4. Case presentation:
The 43-years-old women, loss her eye vision after coma. The author must present the cause, symptom and clinical course of the event. Whether it caused by ischemic infarct, vertebrobasilar artery insufficiency or other disease?
5. Discussion:
"Only 4 reported cases of patients with retinal artery occlusion cause by left atrial myxoma" May underestimate the reported cases? Author need search more data to confirm the discussion.
Reference maybe wrong: Schmidt report is reference 3 but author labeled as 4.
Examination revealed a bone-white fundus with no perfusion of the retina or circulation. (what is the mean?)

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Needs some language corrections before being
published

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
