Reviewer’s report

Title:A Case of Fungal Keratitis And Onychomycosis Simultaneously Infected By Trichophyton Species

Version:2 Date:27 May 2014

Reviewer:Yan-Ning Yang

Reviewer’s report:

“His eye symptoms had started 3 weeks ago spontaneously. He had been treated with topical fortified 5% cefazolin and 2% tobramycin alternately 4 times a day, but symptoms had not improved after treatment”. How long about this treatment time?

“We inspected the patient’s body for other fungal skin infection, and found onychomycosis on the patient’s foot.” Please show pictures of patient’s foot.

“ In spite of the treatment, no clinical improvement was observed for 4 days and corneal infiltrate was worsened.” Please show pictures of the worsened corneal infiltrate.

“Four days after the penetrating keratoplasty, the corneal graft was clear with moderate cellular inflammation reaction in the anterior chamber. ” Please show pictures.

The graft was clear with no anterior chamber cellular reaction at postoperative 1 month. Please show pictures.
