Title: Triple-A Syndrome with Prominent Ophthalmic Features and a Novel Mutation in the AAAS Gene: Case Report

Version: 3  Date: 23 April 2004

Reviewer: Henry Houlden

Reviewer's report:

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

A well written short report of a family with triple A syndrome and interesting worked up ophthalmological examination.

To compare the severity of this case and to see if the eye signs were unusual in comparison with the other features could the authors give some details of the adrenal problem and if replacement was needed as well as if this case had a neuropathy clinically or given in nerve conduction studies.

Could the authors confirm that the novel mutation was not present in controls.

What next?: Accept after minor essential revisions
