Reviewer's report

Title: Hyperopic shift after LASIK induced Diffuse Lamellar Keratitis

Version: 3 Date: 8 April 2006

Reviewer: David R Hardten

Reviewer's report:

General
This case still does not sound like the typical diffuse lamellar keratitis, in that it doesn’t go through the usual stage IV DLK with a well defined para-central scar. Otherwise the authors have addressed the questions raised earlier.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
