Reviewer's report

Title: Assessment of Stereoscopic Optic Disc Images using an Autostereoscopic Screen. Experimental study.

Version: 1 Date: 25 December 2007

Reviewer: Hsin-Yi Chen

Reviewer's report:

Comment to the authors:
1. As a reader, I can not clearly figure out the so-called "Autostereoscopic screen" from the method part. Is it a device (new instrument) or a software? Are this device available now?
2. If possible, please provide the picture of this device in the text? I believe that will help the reader to understand the new device.
3. Is it possible to show one glaucoma case using autostereoscopic screen? How to measure the C/D ratio?

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
