Reviewer's report

Title: Prevalence of Diabetic Retinopathy in Tehran Province: A Population-Based Study

Version: 4 Date: 2 June 2009

Reviewer: Rajiv Khandekar

Reviewer's report:

Marked improvement in manuscript

1. Few English corrections are still needed.
2. Authors have shown HbA1c and DR is having association which is statistically not significant in multivariate analysis. This needs explanation in discussion.
3. I failed to understand what authors achieve in Table 2 A & B by showing details separately in male and female groups. This was not objective of the study in the beginning and with small sub sample it does not give scientific information. It should be omitted.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
