Reviewer’s report

Title: Aerobic exercise and intraocular pressure in normotensive and glaucoma patients.

Version: 4 Date: 20 July 2009

Reviewer: Luciano Quaranta

Reviewer’s report:

The authors replied to the majority MCR’s of this reviewer. Sample size calculation is not already specified in the methods section, and commercial name of the device used for assessing BP and HR should be stated. Sample size calculation is a crucial part of any clinical investigation, and has to be calculated before the study is performed. Please clarify this matter. A short statement on the potential beneficial effect of the increase of ocular perfusion pressure could be added in the discussion.

Best regards
Luciano Quaranta
