Reviewer's report

**Title:** Difference of clinical features in childhood Mycoplasma pneumoniae pneumonia

**Version:** 3 **Date:** 29 March 2010

**Reviewer:** Mark Neuman

**Reviewer's report:**

I reviewed the new draft. Looks improved. Worth publishing, but would encourage the authors to work on again improving the discussion by commenting about the clinical relevance of their findings. How might this information be useful for clinicians caring for children with pneumonia in general, and mycoplasma specifically.
