Reviewer's report

Title: Monitoring Health Related Quality of Life in paediatric practice: development of an innovative web-based application

Version: 2 Date: 13 November 2010

Reviewer: Galina Velikova

Reviewer's report:

The revised manuscript is a narrative, describing authors plans, design and thoughts during the development of a web-site for paediatric patients to self-report HRQOL. It does not contain any quantitative data and the conclusions can be only tentative. The two added case studies are good illustrations of the use of KLIK ON and the generated PROfile.

Minor comments:
Page 13, first paragraph has a section in Dutch.
The Conclusion is worded too strongly. The authors can’t really state that “KLIK ON profile is an efficient way to monitor and discuss HRQOL issues” until they complete the evaluation study. They perhaps can say that their experience during the study was positive and suggests that KLIK ON may contribute to such discussions.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
