Reviewer's report

Title: Toxoplasma, Toxocara and Tuberculosis co-infection in a four year old child: a rare case report

Version: 1 Date: 14 March 2011

Reviewer: Chifumbe Chintu

Reviewer's report:

Major Compulsory Revision: Although HIV infection may not be as high as in other countries, mention of the HIV sero-status of the child is important as both Tuberculosis and Toxoplasma gondii are considered to be opportunistic infections in HIV infected persons.

Minor Essential Revisions: No mention of the child ever receiving BCG vaccination is made. This could influence the interpretation of mantoux test.

I was unable for some reasons to verify the statement "Approximately 250,000 children worldwide develop tuberculosis--------" when I visited the site quoted. Any clarification?

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
