Reviewer's report

Title: Latin American Consensus: Children Born Small for Gestational Age

Version: 2 Date: 5 April 2011

Reviewer: Martijn Finken

Reviewer's report:

The manuscript has improved.

There is only one point which deserves some attention (page 13). Laboratory measurements should be performed at regular intervals. Although I think that measuring indices of insulin sensitivity is not valuable for the majority of GH-treated children, measurement of IGF-1 levels is. Please, state that measuring the IGF-1 level once a year is necessary, but preferably this should be done twice a year.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
