Reviewer's report

Title: Higher Incidence of Perineal Community Acquired MRSA Infections among Toddlers

Version: 2 Date: 17 July 2011

Reviewer: Birgit Strommenger

Reviewer's report:

After reading the revised version of the manuscript and the authors' responses, I confirm that my remarks have been answered.

However, although the authors answered all reviewer recommendations the manuscript improved only partially. As a result of the revision a lot of data was just removed, most probably because it could not be confirmed after statistical analysis. The remaining data is quite limited.

Removing of text leaded to inconsistencies; thus the remaining text still needs some linguistic revision.

Some data added, is simply not correct: E.g. ACME is not unique to USA300.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
