Reviewer's report

Title: Physical activity and fat mass gain in Mexican school-age children: a cohort study.

Version: 4 Date: 11 June 2012

Reviewer: vanesa españa romero

Reviewer's report:

The manuscript was improved consistently from the first version and I congratulated the authors for it.

The main concern I had was the accelerometer cut-off point for MVPA (It was used 970.2 counts/min), however the same cut-point was used. In spite of this I think the manuscript is able to be published.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:

I declare that I have no competing interests
