Reviewer's report

Title: Early detection of children at risk for antisocial behaviour using data from routine preventive child healthcare

Version: 1 Date: 4 November 2011

Reviewer: Luciana Anselmi

Reviewer's report:

The modifications have further increased the value of this interesting paper. The authors have been responsive to previous reviewer and included the suggestions in the paper.

I understand the difficulty to include new explanatory variables in this study as suggested in review. However, the authors have been written in the paper their future intention to improve the detection algorithm extending the assessment procedure with others potential predictors of antisocial behavior.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests.
