Reviewer’s report

Title: Predictors of receiving therapy among very low birth weight 2-year olds eligible for Part C early intervention in Wisconsin

Version: 3 Date: 26 March 2013

Reviewer: Emily FEinberg

Reviewer’s report:

This a review of a revision of original manuscript. The authors have responded to the major issues identified in the review. I have a few remaining concerns

Compulsory Revision. Figure 1. It is customary to show stratified results if there is a significant interaction. I would prefer to OR and 95% CI of receiving therapy for children with Medicaid vs. private insurance, stratified by neighborhood disadvantage rather than predicted probabilities. The rest of results presented in the paper are ORs and 95% CI. If the authors choose to retain predicted probabilities, please provide a confidence interval for the predicted probabilities shown in the Figure 1.

Editorial issues.
1. Abstract - Line 4 - word "of" should be removed
2. Figure 1 - check punctuation of text beneath the Figure

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
