Reviewer’s report

Title: Factors associated with asthma among under-fives in Mulago Hospital Kampala Uganda: a cross sectional study.

Version: 2 Date: 30 July 2013

Reviewer: Paul Mullan

Reviewer’s report:

All major and minor revisions were addressed in the comments in their report. The only response that I thought was less strongly stated was the case definition for asthma in that so many modifications were made to a established (GINA) guideline. That said, I understand that definitions do need to be modified at times due to local documentation and resource limitations.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
