Reviewer's report

Title: Intracranial hypertension presenting with severe visual failure, without concurrent headache, in a child with nephrotic syndrome.

Version: 1 Date: 1 August 2013

Reviewer: Sambuddha N Ghosh

Reviewer's report:

1) Minor essential revision

As MRI was normal, pressure was >400 mm H2o and patient was getting steroid, the authors should discuss why this was not a case of idiopathic intracranial hypertension

2) Discretionary revisions

Authors may consider the following articles for reference

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
