Reviewer’s report

Title: Beyond the Clinic: Improving Child Health through Evidence-based Community Development

Version: 3 Date: 9 July 2013

Reviewer: Mohammed Taha

Reviewer’s report:

Major revision:
It is review of systematic reviews. Is the reviews included used the same measurement for the domains, primary and intermediate outcomes? This needs to be clarified. Otherwise one cannot amend differently measured items into one. Thus I recommend to be briefed on the measurement issues.

It is stated that the review includes systematic reviews from 1900 to now. In review of systematic reviews and other systematic reviews it is crucial to describe whether the review includes all reviews conducted on all world languages or, is the review about a certain language (eg. English only)?

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

the study is review of systematic reviews, so no area need to be seen by statistician.
