Bienkiewicz et al present a case report regarding a multi-disciplinary approach to a child with arthrogryposis. The case does have some useful aspects of management. The writing in English could be improved.

Major revisions:

Case report:
1. “Hbd” is a non-standard abbreviation (I presume it means weeks?)
2. Do the authors have a cause for the arthrogryposis. They need to comment on investigations done to outline this – or was a karyotype the only one. Was there a reason for the poor movement?
3. Which vitamins and which anti-convulsants were prescribed?

Management:

The authors note in the discussion use of ultrasound to delineate issues prior to surgery, but this information is missing from the management parts of the case report. What was done here – this would be a useful part of the case to share!

Discussion: Good discussion of issues and rationale for early multi-disciplinary involvement, although I’m not sure the final paragraph is relevant.

References:

The reference list was not included in the version of the paper I received, so I have been unable to assess this. It needs to be included.

Figures:

Many of the figures don’t add much to the text. Figures 1 and 3 are unnecessary. Figure6 is also probably not necessary.

Minor revisions/Other comments:

Page 4 Line 1: “looks like it was dislocated” should read “appears dislocated” or “is dislocated”

Page 4 cytogenetic result: The third sentence of this paragraph does not make sense. I am very unclear what the authors are trying to say here.

Page 4, cytogenetic results…..last sentence, I presume this is deformation of the occipital bone?
Page 6 line 2: This sentence I think should read “the condition before the plaster manipulation is shown in figure 7” or similar.

Page 6 “Photograph 8: “Gypsums “ is not an English word, I presume the authors mean casts?

Be careful about spelling of arthrogryposis (eg first word in discussion”

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
