Reviewer's report

Title: Birth and Developmental Correlates of Birth Weight in a Sample of Children with Potential Sensory Processing Disorder

Version: 3 Date: 14 December 2012

Reviewer: Nicoletta Salerni

Reviewer's report:

The authors have taken care to address all the concerns raised by my previous review. Therefore, I believe that the revision of the manuscript makes it now suitable for publication.

I would only point out the opportunity to undertake the following minor revisions:

Analyses
Last line of page 5: According to the whole text, the independent variable 2) should be changed as “gestational age classification considered with birth weight”.

Second line of page 6: the correct sentence should be “Independent t-tests were CONDUCTED ...”

Birth History
Table 3, in the second sentence, becomes “Tables 3 A and 3 B show...,”

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
