Reviewer's report

Title: Determining an anthropometric surrogate measure for identifying low birth weight babies in Uganda: a hospital-based cross sectional study

Version: 3 Date: 1 April 2013

Reviewer: Alan Horn

Reviewer's report:

The Authors have now addressed all the issues raised in my previous reviews of this paper.

Some minor grammatical errors persist:

Abstract:
4th line: "aimed at identifying", should be "aimed to identify"
3rd last line "in the Uganda setting" should be "in the Ugandan setting"

Main text:
P3: line 4: "has almost remained unchanged" should be "has remained almost unchanged"
P5: line 11: "There is therefore need for a study" should be "There is therefore a need for a study"
P7: line 13 - 17: The following should be capitalised:
2. Mid-
3. Chest
4. Thigh
5. Foot

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
