Reviewer's report

Title: Early childhood risk and resilience factors for behavioural and emotional problems in middle childhood

Version: 2
Date: 16 May 2014

Reviewer: Sarah Stewart-Brown

Reviewer's report:

The authors have addressed all my comments satisfactorily with one exception. The abstract still suggests that the authors are reporting a prevalence of behaviour problems. The second clause of the first sentence of results should be changed to read ‘29.5% and 25.6% respectively of children were found to have internalising and externalising behaviour problem scores in the lowest quintile of the distribution on the NSCLY Child Behaviour Scales’ or something similar. Apart from this minor issue the paper is now suitable for publication.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
