Reviewer's report

Title: Pain, motor function and health-related quality of life in children with cerebral palsy as reported by their physiotherapists

Version: 3 Date: 19 May 2014

Reviewer: Noémi Dahan-Oliel

Reviewer's report:

This is a re-review.
Most comments have been addressed. Most participants have GMFM level 4 or 5, so more severe CP. Do the authors believe that this sample therefore experienced more pain as perceived by physics compared to children with more mild forms of CP... And again my initial comment as to whom the participants are (e.g. after surgical interventions or just regular follow-up?) could be addressed.
On page 9 (e.gr. presence of recent chirurgic interventions) should read (e.g. presence of surgical interventions)

Overall, I think the manuscript can be published now.
Thank you

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
I do not have any conflicting interests.
