Reviewer's report

Title: Isolated enophthalmos: an uncommon gateway to orbital tumors in pediatrics. 9 month-old female presenting with isolated enophthalmos as the unique sign of a malignant orbital tumor: a case report.

Version: 1
Date: 7 July 2014
Reviewer: Hokyung Choung

Reviewer's report:

Subtitle: I recommend "metastatic orbital tumor" instead of "malignant orbital tumor"

Abstract: Stage 4 already means systemic metastasis so, metastatic stage 4 neuroblastoma is not proper expression.

Key word: "neuroblastoma" should be included

Case description:
1. The most important examination is visual acuity of the right eye. So you should describe the visual acuity. For example, fixing and following was good....

2. It is better to write about the past medical history, birth history and the onset of enophthalmos.

Discussion
1. Commonly, breast cancer is used in most cases not mammary carcinoma.
2. You had better describe the possible mechanism of enophthalmos in this case and other possible causes of osteolytic diseases.

Photos: There is no photograph of showing enophthalmos of this case.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
