Reviewer's report

Title: Partial Palivizumab Prophylaxis and Increased Risk of Hospitalization Due to Respiratory Syncytial Virus in a Medicaid Population: A Retrospective Cohort Analysis

Version: 2 Date: 26 April 2014

Reviewer: Martin CJ Kneyber

Reviewer's report:

This is a pretty straight forward manuscript. well done. I have just one question: were the authors surprised about their findings? It seems obvious that non-compliance with the palvizumab dosing regime would lead to an increased number of hospitalisations.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
