Reviewer's report

Title: Risk of Cardio-Respiratory Dysfunction in Preterm Infants Placed in Car Seats: A Cross-Sectional Study

Version: 4 Date: 10 May 2005

Reviewer: Anne Greenough

Reviewer's report:

General
I am unsure why the authors wish to detect a threefold difference - why is this clinically the important target to set. Their answer to my question regarding repeatability of the measurement technique isn't really giving an answer - as the authors need to quantify what is meant by one standard deviation.

-----------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-----------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-----------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)
