Reviewer’s report

Title: Racemic epinephrine during hospitalization improves acute respiratory distress but does not shorten length of stay for bronchiolitis: a randomized controlled clinical trial

Version: 2 Date: 31 March 2005

Reviewer: Hema Patel

Reviewer’s report:

General
This is a review of a revised manuscript. The authors have clearly addressed each item identified in the previous review. Their responses and manuscript modifications are satisfactory. No further revisions requested.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No

Declaration of competing interests:

Non financial interest in relation to this field:
I am currently a co-investigator in a multi-centre trial examining the effect of short term nebulized epinephrine and oral dexamethasone in young children with acute viral bronchiolitis.

I believe this is a non-competing interest but note it for record.
