Reviewer's report

Title: Evaluation of pulse-oximetry oxygen saturation taken through a skin protective covering

Version: 3 Date: 3 January 2006

Reviewer: Alex Dullenkopf

Reviewer's report:

In my opinion the authors met the substantial critics (especially the conclusion) and now present a paper which has the potential of being published.

However, I leave it to the Editors to decide, if the statement regarding the Ethics comittee approval is sufficient to allow publication in a BMC Journal. Further, I would delete the part about the in-vitro testing from the manuscript. And last, there still are some typing errors and negligences regarding the presentation.
