Reviewer's report

Title: A reference frame for blood volume in children and adolescents.

Version: 4 Date: 8 February 2006

Reviewer: Paulo J Nogueira

Reviewer's report:

General

I will state again that I don't see any statistical problem as long as referees on haematology area are comfortable with what the authors have done. Namely the so called standardization method and the terminologies used.

----------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

----------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

----------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)
