Title: A randomized controlled trial of sucrose and/or pacifier as analgesia for infants receiving venipuncture in a pediatric emergency department

Version: 2 Date: 6 June 2007

Reviewer: Sharyn Gibbins

Reviewer's report:

I continue to have difficulty accessing the web version. I have reviewed the attached paper, which I think is much improved. I still would like to see clarification regarding ages as the tables suggest that infants are between 63-68 days old. I do not see who was 6 months in the sub-analyses. All other suggestions appear to be evident.
