Reviewer's Report

Title: A Neonatal Presentation Of Factor V Deficiency: A Case Report

Version: 3 Date: 22 December 2006

Reviewer: Paula Bolton-Maggs

Reviewer's report:

This paper is still unnecessarily long and there are typos in it which should be corrected on pages 4, 5 and 6. It has been improved by the inclusion of the other cases in the English language. As the cases are so few why not add the ones in other languages (there are at least 3 others)? Although St. Thomas' hospital is acknowledged it is usual to put the name of the person who did the test (Michael Mitchell?) The picture of the nipple is unnecessary and does not contribute anything to the paper at all.
