Reviewer's report

Title: Participation in everyday activities and quality of life in pre-teenage children living with cerebral palsy in South West Ireland.

Version: 3 Date: 22 September 2008

Reviewer: Jan Willem Gorter

Reviewer's report:

The authors have addressed most of the issues raised in previous rounds. The manuscript has much improved. The term 'impaired GMFCS' sounds very strange to me and I would suggest to talk about impaired motor abilities or to talk about the specific GMFCS levels. As mentioned before I think that GMFCS is based on daily motor activities and not on impairments in body function and structure. This terminology is used differently by the authors.

Minor point: check spelling and correct the typo in the name 'Palisano' in the references

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
