Reviewer’s report

Title: Descriptive epidemiology of stigma against depression in a general population sample in Alberta

Version: 3 Date: 22 December 2009

Reviewer: Larissa Wolkenstein

Reviewer’s report:

Discretionary revisions:
(1) Please report the significance of the overall regression model and the gender specific regression models (not only for the predictors within these models) to make sure that valid conclusions are drawn from the regression models.
(2) It would be helpful if the authors could provide an explanation why especially young people should be targets of stigma reduction campaigns as no consistent trends emerged by age in stigma.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
