Reviewer's report

Title: Low-intensity blue-enriched white light (750 lux) and standard bright light (10 000 lux) are equally effective in treating SAD. A randomized controlled study.

Version: 4  Date: 7 January 2011

Reviewer: Paul Desan

Reviewer's report:

This paper has been revised appropriately with regard to the comments of both reviewers, in my opinion. I believe that it is ready for publication and that it is a study of importance on the critical issue of optimum light therapy.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
