Reviewer's report

Title: Reduced peak oxygen uptake and implications for cardiovascular health and quality of life in patients with schizophrenia

Version: 2 Date: 22 November 2011

Reviewer: Inger-Lise Aamot

Reviewer's report:

I'm very pleased with the revision, and have no further comments about the manuscript except one minor revision. The article is interesting, and the question about fitness in different patient groups are most relevant.

Minor essential revision:

Figure 1: the text in the figure includes the word "stratifies". If this could be changed to strata, it would be better.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:

I declare that I have no competing interests.
