Reviewer's report

Title: Cognitive correlates of repetitive transcranial magnetic stimulation (rTMS) in treatment-resistant depression- a pilot study

Version: 1 Date: 22 May 2012

Reviewer: Francesco Saverio Bersani

Reviewer's report:

The study is interesting and well written, I do not have any particular revision to suggest about it.

There is only one important issue: the positive effect of TMS treatment on prefrontal cortex on cognitive symptoms of depression is a known data, already assessed by several studies.

For this reason, the results of the study do not increase the knowledge of scientific community on the topic.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
