Reviewer's report

Title: The feasibility and validity of ambulatory self-report of psychotic symptoms using mobile phones

Version: 3 Date: 1 August 2012

Reviewer: Bryan McCormick

Reviewer's report:

1. Major Compulsory Revisions
   a. Authors have adequately addressed major compulsory revisions related to the creation of sub-sets of symptoms items. Methods are now more clearly understood.
   b. The inclusion of references to alpha reliability values in the text adequately addresses my concern related to the unaddressed hypothesis

2. Minor Essential Revisions
   a. Authors have adequately clarified the sources from which subjects were drawn
   b. Stated minimum response rates are now consistent with reported figures.
   c. The authors have provided a more complete discussion of the challenges of this data collection technique with individuals with more severe symptoms.

3. Discretionary revisions
   a. The authors have addressed these concerns adequately.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
