Reviewer’s report

Title: Hyperactivity Persists In Male and Female Adults with ADHD and Remains a Highly Discriminative Feature of the Disorder: A Case-Control Study

Version: 2 Date: 22 September 2012

Reviewer: Carroll W. Hughes

Reviewer’s report:

The author has done an excellent job of addressing concerns in original review. I believe the ms. is ready to go and will be a very important contribution to the literature. The analytic methods are very thorough and important to future work with the instrument and the field in general.

There are two typos in Figure 3 where the words “preseveration” should be “perseveration”. The word is spelled correctly in the text.

Level of interest: An exceptional article

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:

I have done some infrequent consulting for BioBehavioral Diagnostics, Inc. over the past five years. I do not hold any shares or stocks in the organization and do not gain or lose financially from the publication of this paper.
