Reviewer’s report

Title: Prevention of anxiety disorders in primary care: A feasibility study

Version: 2  Date: 9 August 2012

Reviewer: Peter Lucassen

Reviewer’s report:

I think that this is a good and well-described study about the prevention of anxiety disorders. The limitations are clearly described. I do not have any major compulsory comment. I have only one minor compulsory comment: the authors should use Standard Deviation instead of Standard Error to describe the variation in data concerning age (page 9)

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**
