Reviewer's report

**Title:** The prevalence and characteristics of suicidality in HIV/AIDS as seen in an African population in Entebbe district, Uganda

**Version:** 2  **Date:** 2 April 2012

**Reviewer:** Paolo Girardi

**Reviewer's report:**

Minor Essential Revisions

P-value is an important way to assess the significance of a result. I think it is more appropriated 5% in alfa level...with 10% of your results are less plausible...

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** Yes, and I have assessed the statistics in my report.
